This dimension table contains a row for each channel or app that your customers use to create orders. Some examples of these include Facebook and Online Store. You can join this table with the sales table to measure channel performance.

Frequently Joined Tables

No information about joined tables.

Find in table...

| Name | Type | Description | Tags |
|---------------|---------|---|--------|
| api_client_id | numeric | ID of the API client that called the Shopify API. For example, the ID for the online store is 580111. | + Tags |
| title | varchar | Full name of the app or channel. For example, Point of Sale, Online Store. | + Tags |
